PROFESSIONAL SUMMARY

Dedicated B.Tech Computer Science student at GITAM University (2027), driven by curiosity and a love of technology. Learns new concepts quickly and puts them to use right away. A collaborative team player who communicates well and enjoys solving problems with others. Looking for an opportunity to build practical experience and grow in web development and related fields

EDUCATION

GITAM University (Gandhi Institute of Technology and Management), Bengaluru *2023 – 2027*
Bachelor of Technology, Computer Science

Narayana PU College, Bengaluru 2021-2023
State Board, Class XI–XII (PUC)

Relevant Coursework: Web Development, Agentic AI Engineer

TECHNICAL SKILLS

Programming Languages: Python
Web Development: HTML, CSS, JavaScript, Reactjs, MySQL, FastApi.
AI Technologies: Large Language Model (LLM), Retrieval-Augmented Generation (RAG), LangChain, Model Context Protocol(MCP), Open AI.

PROJECTS

Spam News Detection System (NLP & Machine Learning) *Sept 2025 – Nov 2025*

- Developed a machine learning system to classify news articles as real or fake. It was trained on labeled True/Fake news datasets, and users can enter any article text to get a real or fake prediction.
- Built an NLP preprocessing pipeline (lowercasing, special-character removal, stop-word removal, lemmatization) and converted text to TF-IDF features using up to 50,000 unigrams and bigrams, to capture the language patterns that separate fake news from real news.
- Trained and evaluated a Multinomial Naive Bayes classifier on an 80/20 train-test split. The report describes a hybrid ensemble (Bernoulli NB, Multinomial NB, Random Forest and Kernel SVM combined by majority voting) with 95.07% accuracy, 97.47% precision, 92.53% recall and 94.94% F1-score.

AI-Powered Geological, Mining & Reporting Platform (SIH 2026) *Jan 2026 – Feb 2026*

- Developed an AI-powered platform to automate geological and mining report generation by processing scanned PDFs, spreadsheets, images, and other documents..
- Implemented Retrieval-Augmented Generation (RAG) using ChromaDB, text embeddings, and Google Gemini to enable semantic document search and AI-based question answering.
- Built backend APIs using Python and FastAPI, integrating document extraction, data validation, topic identification, and automated report generation to improve reporting efficiency and information retrieval.

Personalized Retail Recommendation System (AI/ML & Multi-Agent) *Sept 2026 – Sept2026*

- Developed an AI-powered recommendation system using customer profiles, browsing history, transactions, inventory, seasonal events, and promotional data.
- Implemented Two-Tower candidate generation and DeepFM ranking with feature engineering to personalize product recommendations based on customer context and behavior
- Built a 3-agent recommendation pipeline using Python, MinIO, Snowflake, and FastAPI

CERTIFICATIONS

Oracle Certified Foundations Associate – Agentic AI Certified Foundations Associate — Oracle University | October 2026

Python Fundamentals — Infosys Springboard | October 2026

SQL Developer — Infosys Springboard | July 2026
